– *Sports Illustrated*

If you are concerned on providing a better life for you and your family, this is an essential reading that can give you directions and motivation on making better, more informed choices and guide you to great results for you and the generations to come.

A self-published phenomenon examining the habits that kept our ancestors disease-free—now with a prescriptive plan for “The Human Diet” to help us all live long, vital, healthy lives.

Physician and biochemist Cate Shanahan, M.D. examined diets around the world known to help people live longer, healthier lives—diets like the Mediterranean, Okinawa, and “Blue

Zone”—and identified the four common nutritional habits, developed over millennia, that unfailingly produce strong, healthy, intelligent children, and active, vital elders, generation after generation. These four nutritional strategies—fresh food, fermented and sprouted foods, meat cooked on the bone, and organ meats—form the basis of what Dr. Cate calls “The Human Diet.”

Rooted in her experience as an elite athlete who used traditional foods to cure her own debilitating injuries, and combining her research with the latest discoveries in the field of epigenetics, Dr. Cate shows how all calories are not created equal; food is information that directs our cellular growth. Our family history does not determine our destiny: what you eat and how you live can alter your DNA in ways that affect your health and the health of your future children.

Deep Nutrition offers a prescriptive plan for how anyone can begin eating The Human Diet to:

- *Improve mood
